Case Study 4: Healthcare Electrification in Uganda

The brief

The Ministry of Health in Uganda has **$1,000,000** for a healthcare electrification programme and must decide where to focus it. Use Energy Access Explorer to combine evidence on healthcare needs and electricity supply, identify priority areas, and justify a funding plan. Submit a report of 4 pages.

Questions

The problem. Why does electrifying health facilities matter for health outcomes in Uganda, and what decision does the Ministry face?

Method. Which Energy Access Explorer layers, filters, weights and prioritisation index did you use? Justify each choice for both demand and supply.

Priority areas. Which districts rank highest? Present your ranking and explain what drives the top five.

Budget allocation. How would you spend the $1,000,000? State your cost per facility (with a source), any maintenance reserve, and the facilities and people reached.

Sensitivity and trade-offs. How does your plan change if costs are higher or lower? Where does need conflict with value for money (cost per person)?

Limitations and recommendations. What data gaps or assumptions could change your answer, and what should the Ministry do next?s
